INTRODUCTION

The Healthcare Effectiveness Data and Information Set (HEDIS) is developed by the National Committee for Quality Assurance and has been applied to many diseases, including asthma.1

METHODS

AMR Calculation

Figure 1. Study Design

RESULTS

The number of asthma-related office visits in a year was also reported.

OBJECTIVE

- Measure access to care; and

- More likely to be female (52.6% vs 57.2%, respectively; P<0.001).

- The number of asthma-related office visits with evaluation and management services was slightly higher for patients with a low AMR compared with those with a high AMR (1.9 [SD 2.2] vs 1.3 [SD 1.8], respectively; P<0.001).

- The number of asthma-related office visits with evaluation and management services was slightly higher for patients with a low AMR compared with those with a high AMR (1.9 [SD 2.2] vs 1.3 [SD 1.8], respectively; P<0.001).

- The number of asthma-related office visits with evaluation and management services was slightly higher for patients with a low AMR compared with those with a high AMR (1.9 [SD 2.2] vs 1.3 [SD 1.8], respectively; P<0.001).
